Global Composite Rebar Market Growth 2019-2024

Composite rebar is used in the construction and repair of bridges-automobile, railway, pedestrian, combined. It replaced the metal products, as it has the following characteristics:

- increased wear resistance;
- resistance before exposure to corrosive environment, including seawater;
- resistance to corrosion under high humidity conditions;
- minimum weight, which is important when working with large bridges.

Composite rebar has many types, which include GFRP rebar, CFRP rebar, BFRP rebar and others. And each type has application industries relatively. With corrosion resistance and high strength of composite rebar, the downstream application industries will need more composite rebar products. So, composite rebar has a huge market potential in the future.

The major raw materials for composite rebar are glass fiber, carbon fiber, aramid fiber, basalt fiber, unsaturated polyester resin, epoxy resin, vinyl ester resin and others. Difference in the price of the raw materials will impact on the production cost of composite rebar.

According to this study, over the next five years the Composite Rebar market will register a 9.6% CAGR in terms of revenue, the global market size will reach US$ 578.4 million by 2024, from US$ 364.9 million in 2019. In particular, this report presents the global market share (sales and revenue) of key companies in Composite Rebar business, shared in Chapter 3.
